

The Media Wall range is specifically targeted at the Security, Process and Retail industries as they tend to require off the shelf deliveries, fast on-site set up and a more cost effective product. The Media Wall has been designed to be the most economical way of mounting multiple screens in the most space efficient and cost effective way.

What is the difference between a Monitor Stack and a Media Wall?

A Monitor Stack is individually tailored to each client's requirement with no limit on height, width or shape. Each screen is positioned so the faces are within 1mm of the adjacent screen faces and we routinely incorporate the following and a whole host of other equipment within the stack, which is all contained within a depth of 180mm and has full cable management:

- UMD's (Under Monitor Displays)
- Clocks
- Speakers
- 19" rack mounted equipment
- Sequential start power distribution
- Optical repeaters
- MEU's (Multi format Engine Units)

The Media Wall has been designed with a very different purpose:

The most economical way of mounting multiple screens both space and cost wise

The most important feature we have taken from our Monitor Stack range is the cable management as this was the key to our development focus group's requirements. Secondly, our unique screen mounting brackets allow the removal of the screen with as little as 5mm clearance between the screens above and adjacent to it, and of course our bank tilt which allows a whole bank of screens to be tilted to the same angle; significantly reducing the set-up time.

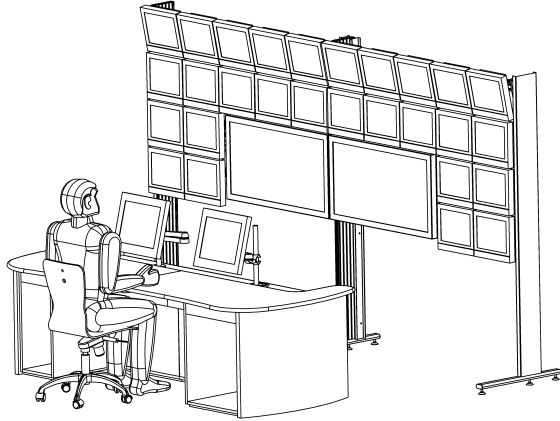

A Media Wall has 3 leg heights - 2.0m, 2.2m, 2.4m. The legs have optional 4" cable trays, allowing the client to specify how many vertical trays are required. To keep the cost of the legs down, we have optional end covers. These will only be required if the legs are in view. And finally, the Media Wall has optional bolt down bases instead of feet. The Media Wall has customer definable beam lengths up to 3.2m between legs and a choice of sizes of beam - 60, 120 and 180mm deep. Each beam has a 3" cable tray as standard, with options of 2" and 4" available if required. Optional under slung cable tray brackets bring Monitor Stack versatility to the Media Wall range.

Customised Media Wall for Retail

Customised Media Wall for Exhibition Stands

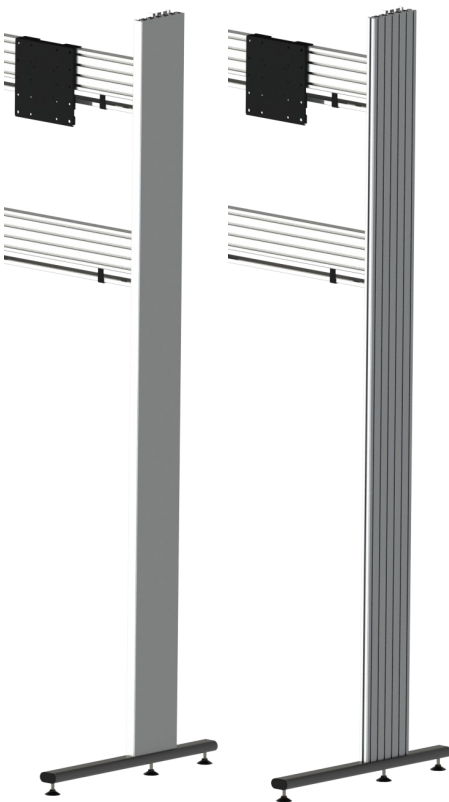

The 3 Leg heights available are:

- 2.0m
- 2.2m
- 2.4m

Beam lengths are customer definable up to 3.2m and have depths of 60, 120 and 180mm

2 x 40" & 28 x 14" screen arrangement

Beam shown with standard cable tray and leg with optional cable tray

As seen on the left, optional End Covers are available. To keep the cost of the Legs down, these will only be required if the Legs are in view.

3 x 2 x 42" screen arrangement and support frame

Bolt-down Bases or Feet are available. Bolt-down bases are particularly useful where the Feet may intrude into a walkway or interfere with desk layouts.
